Biology Made Real Christian Moore-Anderson, 2023-04-05 'This outstanding book... deserves to be very widely read. I hope it makes a major contribution to how school biology is taught.' —Dr Michael J. Reiss, Professor of Science Education, University of London 'This is a book that all teachers, not just biology teachers should read.' —Ben Strathearn-Burrows, Head of Biology, Emanuel School What you'll find inside: —A vision for an integrated and meaningful biology education. —A framework for teaching for meaning-making, which cuts planning time. —Ways of creating a unified narrative across disparate topics. —A taxonomy of understanding that unlocks problem-solving with minimal workload. —Tried and tested examples from mixed-attainment biology classrooms. Introduction I've been motivated to discover what biology is to us as

humans. What it means to understand biology, and how I could make it meaningful for my students. I've read as much as I could and reflected, I've discussed and listened, I've taught and observed. While it doesn't cover all aspects of biology education, this book is about sharing what I've learnt on my journey of synthesising and trialling ideas with my secondary-school mixed-attainment biology classes. 'Not only is this book likely to change how you teach biology but also how you perceive yourself within the living world.' —Dr Alex Sinclair, Institute of Education, St Mary's University, Twickenham

Chapter 1: Meaningful biology relates principally to organisms: This sets the scene for the whole book. It brings together many threads to define what I see as most meaningful to secondary biology students. And therefore what we could do about it when designing our lessons & curricula and thinking about how students progress through their biology education. Planning for meaning-making has vastly enhanced interest and motivation to learn in my classroom. Chapters 2 & 3: Teaching for meaning using variation theory: Next I introduce a powerful—relatively unknown and often misunderstood—pedagogical theory. Variation theory. In these chapters I set out to show how useful it is—and easy to use—in the secondary biology classroom, with many examples. Chapter 4: How to integrate organisms, ecology & evolution: Now I pull together the previous chapters to present a new framework for teaching for meaning-making that cuts planning time & focuses on biology. 'An excellent text demanding we think not just about what we teach but also why and how.' —Dr Paul Ganderton, Consultant and researcher

Chapter 5: Concepts of the organism that unite a biology course: Here I discuss two concepts that I think can unify all the topics on the curriculum. 1. Seeing biology through thermodynamic systems lens and, 2. Seeing biology through an ecological-evolutionary lens via the concept of life strategies. I lay out the reasons why and discuss how I've introduced these ideas with students. Chapter 6: Teaching systems thinking to help students see interconnectedness: This chapter is dedicated to systems thinking. Firstly I show how stock and flow diagrams are very useful for the biology classroom and give examples. Next, I introduce a new taxonomy of understanding biological systems. Chapter 7: Establishing a thinking classroom: This chapter is focused on the whys and hows of embedding the taxonomy into my biology curricula. I give examples of how I use it and examples of my students answers from lower and upper secondary courses. Chapter 8: Navigating classroom and biological complexity: This chapter rounds up the book by considering the complexity of our subject and the classroom. 'Biology Made Real comes with an education health warning—be prepared to have your beliefs challenged.' —Dr Alex Sinclair

Learning and Understanding National Research Council,Division of Behavioral and Social Sciences and Education,Center for Education,Committee on Programs for Advanced Study of Mathematics and Science in American High Schools,2002-08-06 This book takes a fresh look at programs for advanced studies for high school students in the United States, with a particular focus on the Advanced Placement and the International Baccalaureate programs, and asks how advanced studies can be significantly improved in general. It also examines two of the core issues surrounding these programs: they can have a profound impact on other components of the education system and participation in the programs has become key to admission at selective institutions of higher education. By looking at what could enhance the quality of high school advanced study programs as well as what precedes and comes after these programs, this report provides teachers, parents, curriculum developers, administrators, college science and mathematics faculty, and the educational research community with a detailed assessment that can be used to guide change within advanced study programs.
